2. Set full-load delivery on governor.
3. Attach manifold-pressure compensator, expose stop screws, pump $n = 700$, control lever in full-load position.
 - 3.1 Check stop adjustment, $n = 700 \text{ min}^{-1}$, correct by altering initial tension of spring, i.e. turn guide bushing of helical spring:
 - RQ ..653 - Start $0.07-0.09 \text{ kp/cm}^2$

End $0.28-0.30 \text{ kp/cm}^2$) Difference 0.8 mm control-rod travel
 - 3.2 At charge-air pressure 0 kp/cm^2 , use stop screw of bell crank to reduce control-rod travel with respect to setting (2) by amount of difference.
 - 3.3 With charge-air pressure corresponding to full load, position stop screw in housing such that full-load delivery is reduced with respect to (2) by $0.5 \text{ cm}^3/100 \text{ strokes}$.

Pump S 2159 with governor B 573/2R

Low idle setting:

$n = 200 = 5.5-11.5 \text{ cm}^3/1000 \text{ strokes}$ (approx. 7 mm control-rod travel)

Scatter max. 1.0 cm^3 ; in the event of larger scatter, appropriately adjust initial tension of valve spring (Section A, Column 6)

High idle:

$n = 1500 = 12.5-17.5 \text{ cm}^3/1000 \text{ strokes}$ (approx. 6.5 mm control-rod travel)

Scatter max. 3.0 cm^3

Testing shutoff device:

With the pump stopped and at $n 60$ as well as $n 1400$ it must be possible to shift the control rod with the stop lever from the starting and full-load position to control-rod travel 0 (stop).

Sequence of tests:

1. Basic setting of pump (Section A)
2. Testing of governor and setting of breakaway (insertion of shims beneath governor spring - max. 2.5 mm) (Section B)
3. Adjustment of supplementary spring (Section B, Columns 6 - 7)
4. Adjustment of full-load delivery (Section C)
(Section B can no longer be tested after setting full-load delivery!)
5. Low idle
n = 250 = 4.5-9.5 cm³/1000 strokes (approx. 6 mm control-rod travel)
scatter max. 1.0 cm³; in the event of larger scatter, the initial tension of the valve spring is to be altered accordingly (Section A, Column 6)
6. High idle;
n = 1250 = 9.5-14.5 cm³/1000 strokes (approx. 6 mm control-rod travel) scatter max. 3.0 cm³.
7. More tamper-resistant control-rod stop:
Pull knob of pressure plate into end position when stopped and release again; control rod must attain at least 18 mm control-rod travel.
Full-load position must be reached again at n = 500 and WG 400 mm.

* Note: As of date of manufacture (FD) 711, use is made of the new governor spring (1 424 615 050) - replace when performing repairs.

Section C - Full-load values -

F/A .. L 614	24
F/A .. L 714	27

Notes - Section B:

The various governor versions envisaged for special engine types can be attached to other engines in the KHD range.

Set torque control (on RQ and RQV governors if provided) such that delivery values of Section C, Column 5 are attained.

Set torque control (with EP/RSV governors if provided) in accordance with Section C, Column 8 such that delivery values of Section C, Column 5 are attained.

Not all engine-speed stages are listed with EP/RSV governors; set to next speed up the scale and correct with control lever in line with Section C, Column 3. In the case of nameplate "Changed to" this marked speed + 20 min⁻¹ applies (Section C, Column 3).

Notes - Section C:

Engine output (F, B, A) and speed can be seen from engine nameplate; the adjustment data can be taken accordingly from Columns 1...7. Nameplate without indication of output is used in part with vehicle engines (F), see individual sheets KHD..

Accordingly, adjustment is to be made exclusively on the basis of Columns 1...3 for governors without torque control and output data which are provided with torque control.

F - Output = Vehicle output DIN 70 020

A - Output = Overloadable - as per DIN 6270

B - Output = Non-overloadable - as per DIN 6270

B - Output = For heavy-duty continuous operation - marked in some cases with -A-

In cases of doubt, these tables are also to be used for locating the full-load delivery of the individual sheets WPP/001/4, KHD.. Additional letters ..Z, ..Y, for engines with A and B output are then of no significance in this context. Intermediate values are to be determined accordingly.

These documents, in particular the full-load values - Section C - on pages 23-31, have been compiled with the cooperation and approval of KHD.
